

ELFESTATEMENT

► Allows for more conditions

► Executes when the if condition is not satisfied but the elif condition is

LECTURE 3: BOARD AND LONG TERM STRUCTURES

```
temperature = int(input("what is the temperature? "))  
if (temperature < 50):  
    print("wear a coat!")  
elif (temperature < 60):  
    print("wear a sweater.")  
else:  
    print("no coat required.")
```

ELIF STATEMENT

- ▶ Allows for more conditions
- ▶ Executes when the if condition is not satisfied but the elif condition is

```
temperature = int(input("what is the temperature? "))  
if (temperature < 50):  
    print("wear a coat!")  
elif (temperature < 60):  
    print("wear a sweater.")  
else:  
    print("no coat required.")
```
